the 1990s, the number of people in the world who are illiterate has increased from 1.1 billion to 1.2 billion (UNEP 1998).

There are a number of reasons for this increase. One of the reasons is that the population of the world is increasing. Another reason is that the number of people who are illiterate is increasing in many countries. This is because of the lack of access to education and the lack of resources for education.

There are a number of ways to reduce the number of illiterate people in the world. One way is to increase access to education. Another way is to provide resources for education. This can be done by increasing the number of schools and teachers, and by providing textbooks and other educational materials.

It is important to reduce the number of illiterate people in the world because illiteracy is a major barrier to development. Illiterate people are unable to read and write, which makes it difficult for them to find work and to improve their lives.
